Chapter 1

Module Index

1.1 Modules

Here is a list of all modules:

Display 5

Chapter 2

File Index

2.1 File List

Here is a list of all documented files with brief descriptions:

C:/Users/Toby/git/doxygen-example/ display.h	??
A silly file for printing messages	

Chapter 3

Module Documentation

3.1 Display

Macros

- `#define HELLO_WORLD "Hello world!"`
- `#define GOODBYE_WORLD "Goodbye cruel world"`

Functions

- `int displayMessage (char *message)`
A silly function that wraps printf()

3.1.1 Detailed Description

This provides a silly way to display messages.

Precondition

There are no prerequisites.

3.1.2 Macro Definition Documentation

3.1.2.1 `#define GOODBYE_WORLD "Goodbye cruel world"`

A goodbye world string.

3.1.2.2 `#define HELLO_WORLD "Hello world!"`

A hello world string.

3.1.3 Function Documentation

3.1.3.1 `int displayMessage (char * message)`

A silly function that wraps printf()

This is simply to allow a demonstration of the doxygen markup for documenting functions.

Parameters

<i>message</i>	A string that is to be displayed.
----------------	-----------------------------------

Returns

Always returns EXIT_SUCCESS if completed without error.

Chapter 4

File Documentation

4.1 C:/Users/Toby/git/doxygen-example/display.h File Reference

A silly file for printing messages.

```
#include <stdlib.h>
```

Macros

- #define `HELLO_WORLD` "Hello world!"
- #define `GOODBYE_WORLD` "Goodbye cruel world"

Functions

- int `displayMessage` (char *message)
A silly function that wraps printf()

4.1.1 Detailed Description

A silly file for printing messages.

This simply wraps a call to `printf()` and provides a couple of predefined strings to use as messages.
